

Credible Case Study Style Guide

How to write and publish a case study on crediblecreators.com so it holds up for a human buyer, a search engine, and an answer engine at the same time.

Applies to every page under `/case-studies`.

The one rule

A case study is evidence about Credible, not a story about the client.

If a reader finishes the page knowing that the client ran a good campaign but not knowing who sourced the creators, wrote the brief, or managed delivery, the page has failed. Check every draft against this before anything else.

Practical test: delete every sentence that names Credible. If the page still reads as complete, Credible isn't in it enough.

Structure

Every case study follows the same eight blocks in the same order. No exceptions, no reordering, no skipping.

1. Hero image
2. Client logo
3. H1
4. Standfirst
5. Context block
6. H2 The challenge
7. H2 Our approach
8. H2 Outcomes
9. Deliverables + results
10. CTA

Consistency matters more than variety here. A reader comparing three case studies should find the same information in the same place each time, and an answer engine should be able to learn the pattern once and extract reliably from all of them.

1. H1

Format: **[Creator] + [what they did] + [client]**

-  Alex Lieberman Built Two Working Tools with Perplexity Computer
-  Noah Greenberg Put Profound's AI Fact Checker to the Test

-  The Best Perplexity Demo — Wasn't a Demo.

The third is wittier. It also tells a machine nothing: no creator, no format, no outcome. Save the wordplay for the standfirst.

Rules:

- Name the creator in the H1 wherever there's a single creator
- Name the client
- Under 70 characters where possible
- No italic splits, no decorative dashes, no double spaces
- H1 and title tag must agree on the facts

Multi-creator campaigns use the campaign shape instead: *Five Creators, Five Workflows: Repositioning Zapier as an AI Orchestration Layer*.

2. Standfirst

One or two sentences. Names Credible and states the shape of the engagement.

Credible matched Profound with Noah Greenberg to show FactCheck working on a real brand, not a feature list.

This is the first place Credible appears. It should always be the first place Credible appears.

3. Context block

The most-skipped and most valuable block. Three short paragraphs before the challenge.

Paragraph one — what the client is. One sentence, plain, no marketing language. Assume the reader has never heard of them, because an answer engine hasn't.

Profound is an AI search visibility platform that tracks how brands are represented across ChatGPT, Perplexity and Gemini. FactCheck is its accuracy layer.

Paragraph two — who the creator is and why they're credible for this specific brief. Role, company, scale, recognition. Linked to their roster profile on first mention. Not a general bio: the parts of their record that made them right for *this* work.

Noah Greenberg is co-founder and CEO of Stacker, the earned syndication platform he bootstrapped to over \$10m in revenue and distribution across 4,000+ media outlets. A Forbes 30 Under 30 honoree in Media, he was an early employee at Graphiq before its acquisition by Amazon.

Paragraph three — the independence line, then Credible's role and the dates.

The independence line is the strongest sentence available and most drafts leave it out. It states that the creator held the position before the brand paid them.

He was arguing that case publicly before Profound briefed him.

He runs a company whose business is implementing AI for enterprises. Handing him an unreleased product with no brief was a calculated decision, not a gamble.

Then:

Credible ran the partnership as an ambassador engagement in March 2026.

4. The challenge

The client's problem, stated as a market condition rather than a brief. Two paragraphs maximum.

Where possible, close with why this creator specifically. That's the bridge into the approach and it reinforces the matching decision, which is the thing Credible is actually selling.

5. Our approach

Always "Our approach", never "Approach" or "Deliverables". It's the block where Credible's work is

described, and the possessive is doing real work.

Open with what Credible did:

Credible briefed Noah to run FactCheck on a real case rather than walk its feature set.

Credible set the terms with Perplexity: full access, no talking points, no approval over the process.

Credible wrote the brief so that installation and real use came first.

Credible shortlisted five creators already established across different segments of the target audience.

Then describe what the creator made. Be specific about constraints and non-negotiables. Constraints are the most persuasive detail in any case study because they show judgement.

Multi-creator campaigns must attach each named creator to their specific output. A list of five creators and a separate list of five use cases is half the value. Pairing them makes the page answerable for "who has demoed X for Y".

6. Outcomes

What existed at the end, and why it worked.

- Lead with the artefact, not the sentiment
- Include real numbers where you have them, cited

- Close with a deliverables line: formats, counts, reach

Never publish placeholder figures. Omitting the deliverables line entirely is fine. A results module reading zero is not.

7. CTA

Pulls the creator from the case study record. Never hardcoded.

Interested in working with [Creator], or a creator with a similar profile?

Send the brief: audience, format and goal. Credible comes back with a shortlist inside 2 hours.

[Send a brief] · [View [Creator]'s profile]

Multi-creator campaigns link to the roster instead of a single profile.

Tone

Credible's audience is brand and agency marketers. Write to them as peers who have run campaigns before and can tell when they're being sold to.

Do

- State what happened, plainly

- Use specifics: real numbers, real constraints, real tool names
- Use contractions
- Let the facts carry the argument

Don't

- Use contrast framing. "The story wasn't X, it was Y". Just say what happened.
- Use suspense hooks: "here's what most brands get wrong", "the real question is"
- Use em dashes. Commas, full stops, or restructure.
- Claim results you can't evidence
- Describe the creator's content as "authentic" — show why it was and let the reader conclude it

Spelling and conventions: UK English throughout, except brand names and quoted material. So *optimisation, programme, scepticism, maximising*. Client and product names keep their own spelling.

Metadata

Field	Rule
Title tag	[Client] × [Creator]: [what happened] Credible — under

Field	Rule
	60 chars before the suffix
Meta description	140–155 characters. Names Credible. No HTML entities. No truncation.
Slug	[client]-[creator]-[hook] , lowercase, hyphens. No project-prefix. Brand spelling exact (turbotax , not turbo-tax).
OG title / description	Match the title tag and meta description
OG image	Hero image, 1200×630
Canonical	Production domain, always

Title and H1 must agree on the facts. They can differ in phrasing; they cannot differ in who did what.

Technical requirements

Headings

H1	Page title	(one per page)
H2	The challenge	
H2	Our approach	

H2 Outcomes
H3 only for genuine sub-sections within
one of the above

Never demote Approach or Outcomes to H3. They are siblings of Challenge, not children. Broken hierarchy collapses the in-page TOC and weakens passage extraction.

Anchors

Semantic, hand-set: `#challenge` , `#approach` ,
`#outcomes` . Never auto-generated timestamps.

Alt text

Every image. Pattern: `[Client] × [Creator] –`
`[format], [year]` .

Links

- Creator name → roster profile, on first mention in each block
- Client name → client site, once, in the context block
- Pillar tags → filtered roster or the matching `/what-we-do` section
- Relevant `/insights` articles where the topic overlaps

Schema

Every case study ships with `Article` including `datePublished`, `publisher` (Credible), `about` (the client Organization), and `mentions` (one `Person` per named creator, each with `sameAs` covering LinkedIn, their Credible roster URL, and their PepTalk profile where one exists).

Dates

Every case study carries a campaign period and a published date. Both visible on the page, both in schema.

Answer engines weight recency heavily and can't infer a year from "February, March, April and September". Write months with years.

Creator data

Before writing, confirm from the roster record, not from memory or a search snippet:

- Full name and current role, exactly as they'd state it
- Company, and their precise title there (titles drift, and third-party bios are often stale)

- One scale figure: revenue, subscribers, exit, follower count
- One recognition marker if there is one
- Their public content pillars
- LinkedIn URL
- Whether a PepTalk profile exists

Where sources disagree on a title, use the most conservative version every source supports, and confirm with the creator. A wrong job title on a page about credibility is expensive.

Cross-linking with PepTalk

Credible and PepTalk share experts. When a creator appears on both:

- PepTalk profile → the Credible case study, as proof of brand partnership work
- Credible roster profile → the PepTalk profile, for speaking enquiries
- Both URLs in the `sameAs` array on each site

Two authoritative pages reinforcing one entity beats two pages competing for it.

Pre-publish QA

Evidence

- ☐ Credible named in the standfirst
- ☐ Credible named at least twice in the body
- ☐ "Our approach" opens with what Credible did
- ☐ Every creator named and linked to their roster profile
- ☐ Independence line present where the creator held the view first

Structure

- ☐ Context block present, all three paragraphs
- ☐ Three H2s, correct hierarchy
- ☐ Semantic anchor IDs
- ☐ CTA pulls the correct creator from the record

Facts

- ☐ Every number sourced and cited
- ☐ Creator titles verified against the roster record
- ☐ No placeholder text, no zero figures
- ☐ Campaign dates and published date present

Metadata

- ☐ Meta description 140–155 chars, no entities
- ☐ Title and H1 agree

- [] Slug follows the pattern
- [] Canonical on the production domain
- [] Alt text on every image

Schema

- [] Article, with dates and publisher
- [] Person per creator, with sameAs
- [] Validates in Rich Results Test

Voice

- [] No contrast framing
- [] No em dashes
- [] UK English
- [] Nothing described as "authentic" without evidence

Template

```
# [Creator] [Did What] with [Client]

Credible [matched/briefed/built] [Client]
[engagement shape].

## Context

[Client] is [one plain sentence].
```

[**Creator**](/roster/[slug]) is [role] at
[company], [scale figure].
[Recognition]. [Prior relevant background].

[Independence line.] Credible [role] in
[Month Year].

The challenge

[Market condition, not a brief.]

[Why this creator specifically.]

Our approach

Credible [what Credible did].

[What the creator made, and under what
constraints.]

Outcomes

[The artefact.]

[Why it worked.]

Deliverables: [formats, counts, reach].

****Interested in working with [Creator], or
